

Accelerate your Digital Transformation

Why?

Inhibited Innovation

Legacy IT systems lack the flexibility to support emerging technologies, holding back innovation and changeability.

Resource Drain

Maintaining outdated systems diverts significant time and resources from strategic initiatives.

Communication Barriers

Integration challenges results in siloed data and disjointed workflows; obstructs collaboration and decision-making processes.

Competitive Disadvantage

Falling behind in IT infrastructure reduce the ability to stay relevant and competitive in the market.

Long-Term Viability

Outdated systems become increasingly unsustainable over time and hinders long-term business goals and growth opportunities.

Our expertise in cloud transformation is a guide through a fast IT-modernization to a secure platform supporting innovation and growth.

How?

Prepare

Focus on legal compliance, including GDPR considerations. Gain a comprehensive understanding of key business processes and customer behavior to tailor solutions effectively.

Setup

Use our templates and best practices for a swift setup. Launch the next business initiative using the new platform to kickstart the transformation process.

Scale

Migrate legacy systems to the new platform. Use it for all future business development.

What?

Next-generation infrastructure

One of the world's largest networks; 37 regions, 112 zones, and 187 edge locations, available in over 200 countries. Highly scalable containerized infrastructure, fully managed.

Global Application platform

Fully managed services for data storage and messaging; rapid innovation and scalability.

Unified data & AI platform

Support for data analytics at petabyte scale. Hundreds of millions of ML models with customer usage growing 200% YoY.

Built-in security

Keeps more people and organizations safe online than anyone else in the world — billions of users and millions of sites. Prevented the largest L7 DDoS attack recorded to date in 2022. Secures your web applications with state of the art application firewalls, as a service.
